Blacklight is a free, light weight and easy to use backdoor tool. It is mainly designed to mess with the Windows operating system. It has three different functions: 1. By using "Blacklight" you can upload, download and view files in our cloud based storage. 2. "Blacklight" can act as a malicious trojan horse which will drop files on the affected system. 3. "Blacklight" can be used to send e-mails. The program runs in stealth mode and changes system settings as little as possible. It can, however, be made to run in rootkit mode which allows it to bypass Windows OS and send commands to Windows Command Shell. "Blacklight" can monitor your computers activity by keeping a log of all your keystrokes, mouse clicks, system information, and

documents used. Blacklight has been in development for over 6 years and it is updated with new features on a weekly basis.

Installation and Use: “Blacklight” can be installed and run either as a signed executable (in case you have a valid digital certificate) or as a portable executable (in case you do not have a valid digital certificate). Installation process: 1. “Blacklight” will be downloaded by you in a zip file. If you wish to extract the contents of the zip file, you can do so by double clicking on the “Blacklight.exe” icon. 2. Once you open “Blacklight” it will ask you to accept the EULA. You will need to accept it before you are allowed to proceed with installation. 3. After the installation process is complete, you will be presented with a log-in window. 4. Enter your name and password in the correct box and click on the “Log-in” button. 5. “Blacklight” will display a log-in screen. 6. Click on the “OK” button, and it will allow you to start using the software. 7. It will give you the option to restart the computer at the end. If you wish to restart at a later point, you can just close the program and then open it up again. 8.

“Blacklight” can now be run using the normal way, by double clicking on the program. a69d392a70
